

DUMETA®

High quality positioning equipment

Positioner controller

Usable with any Dumeta positioner

Together with experienced welders DUMETA® has developed a controller that has been optimized for practical use.

The controller is compatible with Dumeta positioners and can therefore be connected to every welding positioner. It can control rotating as well as tilting movements. The rotation is programmable in degrees enabling the welder to build a girth weld in different steps. This provides a great advantage as not only the start time but also "welding" or "not welding", welding speed, overlapping lengths, and overlapping speed can be set.

Features

- User-friendly touchscreen control
- Capacity for up to 50 programs
- USB connection for external storage program
- 3 external connections (connecting welding equipment, pneumatic air tailstock, pneumatic welding torch holder, oscillator or the like)
- Programmable tilt angle
- Language selection
